## Free family tree template for preschoolers

HeungSoon/CC0/Pixabay People have an innate curiosity about the natural world around them, and identifying a tree by its leaves can satisfy that curiosity. In addition, many people use trees for landscaping, so it's beneficial to know what species to look for when purchasing saplings. People who acquire property sometimes find mature trees that they may prefer to sell for lumber or move to another location. In each of these situations, the ability to quickly and accurately identify the trees by their foliage is useful. Learning the Basics of Leaf Identification Like any other form of research, leaf identification goes more smoothly with some basic guidelines. There are categories or families of leaves that will help you narrow your tree to specific tree types. For example, some trees, such as Maple and Oak, have single leaves, whereas others, like Walnut and Ash, have a composite with many small leaves stemming from the same branch to form a cluster or frond. The shape of the individual leaves (lobed, sinuate, heart-shaped, ovoid and others) can also help identify the tree type. Armed with this basic information about the leaves, anyone can refer to a book or electronic resource that provides a wealth of information about each species, navigating the source more quickly thanks to the prior classification. Using Field Guides Bound field guides are the classic go-to source for identifying all kinds of things in nature, including trees. These have long been a useful resource for scientists conducting research as well as travelers and new residents unfamiliar with new terrain. Field guides are typically focused on the most common species and are sometimes targeted to a specific region. They include illustrations that help readers identify the species in question as well as information about where it grows, what conditions it requires to thrive and other useful facts. One of the key benefits of a field guide has historically been portability, as they are relatively compact books, presenting a variety of information in a condensed format. Using Mobile Apps If portability and accessibility make field guides both a favorite for outdoor enthusiasts and apps that identify leaves, trees and other natural elements take portability to the next level. With the advent of smartphones and other compact mobile devices, we can perform extensive research anywhere. With the need that devices require electricity at some point to hold charge, they are mainly useful for short expeditions and field research close to home. An app can provide step-by-step instructions that start by asking where the tree is located, what it looks like and since the leaf is, and then it provides specific options from which to choose matching a sample leaf to an area's climate. Choosing Trees for Landscaping Homeowners, landscapers and others who wish to find the best species to plant have a different set of criteria that guides their research. Choosing trees that will be on site for years requires research, and it helps to learn the most prevalent species in the area to determine what will thrive. Mature trees that are already growing well in a given area provide a good indicator of what species are best for the local conditions. There are still considerations for the site, such as the full size of the mature tree, which come into play when deciding where and how many to plant. But narrowing down the field of trees to choose from makes that research simpler and more expedient. Handling Mature Trees Sometimes trees can present a barrier and must be relocated or removed. Moving large trees is a specialized task that requires sophisticated equipment and expertise to ensure the tree survives. Local research for tree estimates can help landowners and landscapers make the best decisions about where and how to move fully-grown trees. In some cases, trees are too large or there is no good place to relocate them and harvesting the trees for lumber is the best course of action. When selling mature trees for lumber, it is essential to know the type of tree as there are different prices and applications for different types of lumber. After identifying the type of tree, resources such as the U.S. Forest Service can provide guidance for how and where to sell the lumber. A common way of visually showing the relationship between generations is to use a family tree chart. If you've ever wondered why it's called a family tree, the answer has to do with the way a normal tree is structured. While the roots are considered the ancestors, the branches are the children. One thing you have to keep in mind when making a family tree chart is to also allow the future members of your family to add their own names to the family tree. 6 Blank Family Tree Templates A family tree can provide a simple way of visualizing a person's family history and ancestors. The following blank family tree templates can help you with easily showcasing the members of your family in pleasant and original manner. Which Type of Family Tree Template Should I Choose? There are multiple types of family tree charts with the most popular one being the ancestor chart or ancestor tree. It's in ascending order, which means it usually starts from the bottom with the name of the person making it (you) and it goes upwards listing the parents, grandparents, great-grandparents and so forth, depending on the number of generations are required. Other types of family trees include hourglass charts, the starting person is in the middle with the parents and grandparents above and the children and grandchildren below. Another known one is a family unit history or family group record which details a couple's information including names, dates and places of birth, dates and places of death, marriage and their children. So if you're unsure or your school assignment doesn't specify it's best to go and pick one of the ancestor chart templates. 8 Family Tree Chart Examples Depending on how many generations have to be listed in your family tree we have chosen the most popular ones: 4 generation family trees, 5 generation family trees, 6 generation family trees and for those that need to go back further, 7 generation family trees. How to Make a Family Tree Template In the case of an ancestor tree your name (the name of the person making the family tree) should be at the bottom (or left) and the name of the parents, grandparents and maybe great-grandparents should expand upwards or towards the right. If you choose one our free family tree templates you don't have to worry about this because most of them are labeled. For a basic family tree the information you have to gather includes the names of your parents and grandparents. If you need to add your siblings then the names of your brothers and/or sisters are also necessary. For a multiple generations family tree the great-grandparents and maybe even the great-great-grandparents will be needed. If you're planning to make an extended family tree then the names of your uncles, aunts and cousins are required. 9 Sample Family Tree Templates Download this family tree template for kids and get a head start on that upcoming school project.
